# TWO DESIGNS - ENDLESS POSSIBILITIES

• RADIAL-LIFT DESIGN

Offers enhanced performance in excavating, grading and digging below grade applications. Due to the radial lift path, the maximum reach is greater at the middle of the lift height.

POWERVIEW® BOOM

Low-profile boom design offers optimal side-to-side visibility.

4.5" (114 mm) wide lift arm construction delivers superior strength and rigidity.

• 1

**EXCELLENT FORWARD REACH** 

The Gehl radial-lift skid loaders provide excellent forward reach at the middle of the lift path. This provides excellent performance for loading flatbed trucks, backfilling or dumping over a wall.

VERTICAL-LIFT DESIGN

Providing more reach at full lift height is optimal for applications that require loading and stacking at high heights. By keeping the load closer to the machine, lift capacities are increased over radial-lift models.

SINGLE-PLANE LIFT ARM

Design features large diameter pivot pins aligned in a single plane for best-in-class vertical/lateral strength and rigidity.

O CLEAR SIGHT LINES

Low-profile lift arm design provides outstanding forward and side visibility.

X-TYPE (v270 GEN:2/ v330 GEN:2)
Upper-rear channel support welded to the top

and between the load arms provides added rigidity without obstructing rear visibility.

## • TRUE VERTICAL

The V400 has a true vertical lift path, while the V270 GEN:2 and V330 GEN:2 have a near vertical path.
